Kingsman SM,

WPI; 1999-059910/05. P-PSDB; AAW86002.

New vector encoding a tumour interacting protein for treating cancer - contains a desired nucleotide sequence and/or protein which recognises tumours, and is used as a gene delivery system to treat cancer.

Example 1; Fig 1A; 82pp; English.

This DNA sequence encodes a 5T4 scFv, designated 5T4scFv.1 (see AAW86002), comprising the heavy chain variable region (VH) from the murine 5T4 monoclonal antibody followed by a 15-amino acid flexible

antibody. The trophoblast cell surface antigen defined by monoclonal antibody. The trophoblast cell surface antigen defined by monoclonal antibody 574 is expressed at high levels on the cells of a wide variety of human tumours. The 574serv.1 DNA sequence can be used to construct single-chain antibodies (see AAV80291) and scfv fusion constructs (see AAV80292-96). The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery system for introducing at least 1 gene encoding a TIP (preferably a tumour binding protein) into a haematopoietic cell lineage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory diseases including arthritis, hypersensitivity, autoimmune disease, paridonnal diseases, cardiopulmonary diseases, ardiovascular diseases, gastrointestinal diseases, inflections, diabetes, Helicobacterrelated diseases, and other immune disorders. The present sequence encodes a ST4 ScFv of the invention. The antibody comprises the W and VI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of single chain antibody capable of recognizing a disease associated molecule for manufacturing a medicament for preventing and/or treating a disease condition associated with disease associated molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         regions from murine 5T4 monoclonal antibody, joined by a linker sequence

This sequence represents an example of a DNA encoding a secreted single chain antibody FV fragment, which is involved in transcellular localisation. In this example, the antibody is directed against the ST4 antigen. A secreted single chain antibody FV fragment can be fused to cytochrome P450 reductase (P450R) derivatives such as anchorless P450R (AAV4228F) or FV fragment (AAV4228F). This enables the fusion protein to be delivered to other cells where it is then transported to the mucleus. Wany drugs' sites of action are in the nucleus, rather than the cytoplasm, where P450R normally functions. P450R or its derivatives can be used to activate prodrugs to their active form via reduction. Administration of a prodrug is useful where the active drug may be metabolised before it reaches its site of action or where the active drug is cytotoxic, e.g., anticancer drugs. Targetted delivery of such cativators allows a reduction in dose of the prodrug, and thus of activators allows a reduction in dose of the prodrug, and thus of activators allowe a reduction in dose of the prodrug, and thus of activators allowe a reduction in dose of the prodrug, and thus of activators allowers, especifically used to treat tumours, inflammation, atherosclerosis and muscular dystrophy, but may also be used to treat many other conditions, e.g., cerebral malaria, rheumatoid arthritis, or conditions associated with hypoxia, ischaemia or hypoglycemia, or to inflammatories, antineoplastic agents and diagnostic agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 GAGGTCCAGCTTCAGCAGTCTGGACCTGACGTGAAGCCTGGGGGCTTCAGTGAAGATA

                                                                                                                                                                                                                                                                                                                                                                                               ઠે
```

New prodrug activating agent targeted to selected cells or tissues, particularly hypoxic cells, for treating e.g. tumors or inflammation.

Example 9; Fig 3F; 149pp; English.

```
The invention provides a new prodrug activating agent that comprises: (1)

a localization domain (LD; other than a tumor-selective antibody) and a
prodrug activating domain (PDD); (1i) at least one nucleic acid encoding
a cytcchrome P450 and under control of at least one constitutive or
inducible expression control sequence or (1ii) a modified hematopoietic
stem cell (MRLSC) containing at least one nucleic acid encoding a PAD and
under control of elements as in (ii). The prodrug activating agent or
vectors that express them, are specifically used to treat tumors,
inflammation, atherosclerosis and muscular dystrophy, but may also be
used to treat many other conditions, e.g. cerebral malaria, rheumatoid
arthritis, or conditions associated with hypoxia, hypoglycemia or
schemia, or to deliver antibiotics, antiviral agents, analgesics,
schemia, or to deliver antibiotics, antiviral agents and diagnostic
agents. LD optimize activity of PAD, e.g. by delivering it to selected
locations or by delivering it to neighboring cells (bystander effect),
effects. Nucleic acids encoding the agent may be expressed selectively in
hypoxic cells. The present sequence represents the DNA encoding the
chingle chain variable antibody fragment against the tumor antigen ST4
(ST4 scFv). ST4 scFv and a human P450 reductase derivative alp450R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This DNA sequence encodes a single chain antibody (Sab), termed 574Sab1 (see AAW86003), comprising an scPv derived from murine monoclonal antibody 574 (see AAW86002) and the human gl constant region. It was constructed from cassettes comprising a translation initiation signal and signal peptide (see AAV80297), the sequence of the secreted portion of 574ScPv.1, and the sequence of the human gl constant region genomic clone. The trophoblast cell surface antigen defined by 574 is expressed at high levels on the cells of a wide variety of human tumours. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (DOI), the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery system for introducing at least I gene encoding a TIP (preferably a tumour binding protein) into

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This DNA sequence encodes B7-1.5T4.1 (see AAW86004), a fusion protein comprising the extracellular domain (amino acids 1-215) of human costimulatory molecule B7-1 joined via a flexible peptide linker to an scPv (see AAW86002) derived from murine 5T4 monoclonal antibody. The CDNA can be inserted into vector pCI to allow expression of the fusion protein in mammalian cells. The trophoblast cell surface antigen defined by 5T4 is ceptressed at high levels on the cells a wide variety of human tumours. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery system for introducing at least 1 gene encoding a TIP (preferably a tumour binding protein) into a haematopoletic cell lineage. B7-1 is expected to bind specifically to CD28 and CTLA-4 present on human T-cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1339 GGATATGGGACGGATTTCACTTTCACCATCAGCACTTTGCAGGCTGAAGACCTGGCAGTT 1398
                                                                       The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a disease medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory diseases including arthritis, hypersensitivity, autoimmune diseases, cancers, central nervous system disorders including Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               540

This DNA sequence encodes a fusion protein comprising the extracellular domain of mouse co-stimulatory molecule B7-1 joined via a flexible peptide linker to an scPv (see AAW86002) derived from murine ST4 monoclonal antibody. The fusion can be used to construct a recombinant vector, e.g. retrovirus, lentivirus, adenovirus, poxvirus, vaccinia virus trophoblast cell surface antigen defined by ST4 is expressed at high levels on the cells of a wide variety of human tumours. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interacting protein (TIP) and optionally a nucleotide sequence of optionally a nucleotide sequence of the reacting protein (TIP) and optionally a nucleotide sequence of by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery setum for introducing at least 1 gene encoding a TIP (preferably a tumour binding protein) into a hasmatopoietic cell lineage. B7-1 binds specifically to CD28 and CTLA-4 present on human CD4 and CD8 cells. (Updated on 17-OCT-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New vector encoding a tumour interacting protein for treating cancer - contains a desired nucleotide sequence and/or protein which recognises tumours, and is used as a gene delivery system to treat cancer.
                                                                                                                                                                                                                                                                                                                                                                       Tumour interacting protein; cancer; gene therapy; vector; 5T4 antigen; monoclonal antibody; single chain antibody; scFv; mouse; B7-1; co-stimulatory molecule; s8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 GAGGTCCAGCTTCAGCAGTCTGGACCTGACCTGGTGAAGCCTGGGGCTTCAGTGAAGATA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a disease medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory diseases including arthritis, hypersensitivity, autoimmune diseases, cancers, central nervous system disorders including Parkinson's disease, pariodontal diseases, cardiopulmonary diseases, cardiovascular diseases, and other immune disorders. The present sequence encodes a B7 link ScFv sequence. A human B7 sequence is linked to a ScFv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CATGGAAAGAGCCTTGAGTGGATTGGACGTATTAATCCTAACAATGGTGTTACTCTTAC 966
                                                                                                                                                                                                                                                                                                                                                                                                                               Use of single chain antibody capable of recognizing a disease associated molecule for manufacturing a medicament for preventing and/or treating a disease condition associated with disease associated molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ATGGAGCTCCGCAGCCTGACATCTGAGGACTCTGCGGGTCTATTACTGTGCAAGATCTACT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This DNA sequence encodes a fusion protein comprising the human IgEl heavy constant region joined via a flexible peptide linker to an scFv (see AAW8602) derived from mutine 574 monoclonal antibody. The fusion construct can be incorporated into a recombinant viral vector for use in gene therapy of cancer. The trophoblast cell surface antigen defined by 574 is expressed at high levels on the cells of a wide variety of human tumours. Binding of IgE to tumour cells should promote a strong histamine and hence inflammatory response and destruction of tumour cells. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIF) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

The invention comprises molecules that specifically bind to at least one intra- or extracellular domain of the poliovirus receptor (PVR) - also known as CDI55 (cluster of differentiation 155). The molecules of the invention have the ability to modulate receptor mediated adhesion, trafficking and/or invasion behaviour of a cell expressing PVR. The molecules of the invention are useful for the prevention and/or treatment of proliferative disorders, cancer or mecastrasis. The molecules of the invention are also useful for identifying agents that can modulate PVR-sequence encodes a PVR-specific scFv protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New molecules that modulate poliovirus receptor (PVR) mediated adhesion, trafficking and/or invasion behavior of a cell expressing CD155 or PVR, useful for preventing or treating proliferative disorders, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            7 CAGCTTCAGCAGTCTGGACCTGGTGAAGCCTGGGGCTTCAGTGAAGATATCCTGC

                                                          The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory disease including arthritis, hypersensitivity, autoimmune disease, cancers, central nervous system disorders including Parkinson's disease, periodontal diseases, cardiopulmonary diseases, cardiovascular diseases, gastrointestinal disorders, infections, diabetes, Helicobacterrelated diseases, and other immune disorders. The present sequence encodes a ScFv of the invention linked to an IgE sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360

The present invention relates to mutated Fv library having mutations designed such that the amino acid at position K (k is integer 2≤k≤ 20) is introduced at amino acid position m (m is integer 2≤k≤(n-1)) chosen from a region consisting of n residues (n is integer 3≤n contained in complementarity determining regions (CDR) or other closer segions of an antibody, and forms limited Fv repetrory of (n n)C m &times ;km. The invention can be used for efficiently acquiring mutated antibody. The present sequence represents V122scFv clone encoding
                                                                                                                                                              Mutated Fv library useful for screening mutated Fv for preparation of mutated antibody for diagnostic purposes, having mutations at specific amino acid positions of complementarity determining regions of antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BP; 208 A; 222 C; 229 G; 193 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This DNA sequence encodes the bispecific tetravalent antibody BiTAbB7-24-1G10H6 (see AAW90217) comprising the anti-B7.1 murine monoclonal antibody (MAAb) B7-24 VH region joined, via a flexible synthetic linker, to the B7-24 VL region, the human 1gG3 hinge region, a helix-turn-helix dimerisation domain, the human 1gG3 hinge domain, the anti-B7.2 MAD 1G10 VH region, another flexible linker, the 1G10 VL region and a hexahistidine tag. The BITAb has been expressed in Bscherichia coli cells. It cross-links, and/or cross-reacts, with the costimulatory molecules B7.1 and B7.2 expressed on the membrane of professional antigen-presenting cells, leading to the inhibition of antigen-specific T cell activation. The invention relates to such B7-binding molecules, methods for their production, and their use for treating or preventing diseases of the immune system, in particular graft rejection, graft versus host

APPLICANT: Fleer, Reinhard
APPLICANT: Fleer, Reinhard
APPLICANT: Fournier, Alain
APPLICANT: Guitcon, Jean-Dominique
APPLICANT: Jung, Gerard
APPLICANT: Jung, Gerard
APPLICANT: Yeh, Patrice
TITLE OF INVENTION: NOVEL BIOLOGICALLY ACTIVE POLYPEPTIDES,
TITLE OF INVENTION: REPEARATION THEREOF AND PHARMACEUTICAL COMPOSITION
TITLE OF INVENTION: CONTAINING SAID POLYPEPTIDES
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:
ADDRESSEE: Rhone-Poulenc Rorer Inc.
STREET: 500 Arcola Road, 3C43
CCUNTRY: Collegeville
STATE: PA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   COMPUTER READBLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1, Al
